Abstract
This paper aims to describing loan words of Japanese language in KBBI (Indonesian Dictionary). The research approach uses structural analysis which assumes that part of speech or vocabulary could be described through its structural characteristic. Besides that, the writer uses supporting theory like lexical and grammatical meaning. Moreover, the analysis method is using descriptive analysis in order to describe empirically based on situation or facts that existed and explained. The main data is Indonesian Dictionary. The result of analysis shows that: (1) Morphological structure of Japanese language vocabulary in Indonesian Dictionary consists of two, base form and derivation form. Base form is Japanese language words that have been absorbed in Indonesian language (found in Indonesian Dictionary) and could be the base of derived form, whilst derivation form is Japanese vocabulary that has undergone affixation process (prefix ber- and pe-) or...
compound process that combines loan words of Japanese language and Indonesian words. (2) There are three part of speech of Japanese language found in Indonesian Dictionary. Namely; noun, verb, and adjective. (3) The meaning of the words exposed in analysis is lexical and grammatical meaning.

**Keywords:** loan words, Japanese language, Indonesian Dictionary

**INTRODUCTION**

Among Indonesian people, Japanese colonization period is considered as one of major milestones in the history of Indonesian language development. During that time, the Japanese people were determined to diminish all Dutch senses by banning Indonesian people to use Dutch language and obliging them to use their own Indonesian language. It enabled the Indonesians to develop raise their status. This Japanese policy was one of linguistic politics incredibly giving advantages to the Indonesians (Permadi & Murtiningsih, 2015)

Seventy-seven (77) years have passed, the relation created between Indonesian and Japanese languages is more developing. It is proven by the fact that Indonesia is ranked second as a country whose people learning the Japanese language come in a great number. According to the data of Japan Foundation 2012, there were 872,411 Japanese language learners in Indonesia. The number came after China whose 1.046,490 people learned the language. In fact, Japanese learners in Indonesia have high motivation in learning since Japanese language is one of difficult languages to learn. It is in accordance with statements that Japanese language has many structures and its diversity becomes one of reasons that makes Japanese language difficult to learn and understand by the learners. Indeed, foreigner language whose mother tongue is different in typology with Japanese language like bahasa Indonesia (Iriantini, 2013).

The dynamics of Japanese language development are increasing year by year in Indonesia. Formally, Japanese language education has developed for more than fifty years. Today, the researcher has Japanese words loaned in our language as listed on KBBI (*Kamus Besar Bahasa Indonesia*) V, either in forms of offline, online, or printed. The number is not significant, about 100 words (see online Japanese KKBI, 5th edition). However, Indonesian Wikipedia states that there are 118 words contained in free
encyclopedias. In this study, the researcher selected the Japanese loanwords contained by KBBI, considering that words listed there were standard vocabularies that could be considered as the main reference of this study.

Loanwords are words loaned from another language and modified in accordance to the recipient language (Sugono, 2008). Loaning foreign words or terms aims for several importance that are: 1) to improve inter-transibility between foreign and Indonesian languages, 2) to make foreign texts more understandable for Indonesian readers, 3) to make the words more brief and shorter than their translation, 4) to raise agreement among experts if the translation contains too many synonyms, 5) to diminish their chances for having any bad connotation (Indonesia, 2009).

Furthermore, the loaning process emphasizes on the visual form. The process aims to fix both spelling and pronunciation or fix either spelling or pronunciation only. In the Japanese loanwords canoyu, judo, karate, and so on, the process is fixation of both spelling and pronunciation although the spelling is Romanized.

Based on the above explanation, problems discussed in this study are what the basic structures and Japanese loanwords consisted in KBBI are and what speeches of words and word meanings found in Japanese loanwords?

THEORETICAL BASIS

Morphology is a part of linguistic structures covering words and their parts. Whorf (in Kridalaksana, 2007) also considers morphology as a subsystem of process modifying lexemes into words. Hence, this study refers to arguments developed by structuralists (Kridalaksana, 2008a). Words are a combination between morphemes through affixation, reduplication, and compounding to form. Word is the largest morphological form; while morpheme is the smallest one (Jerniati, 2013).

The identification can be conducted by employing a structural analysis, an approach or theory arguing that classes of words can be described through their structural characteristics (Nida, 1970). Classes of Japanese loanwords contained in KBBI may be originated from various classes of words.

The categorization is based on a theory of classes of words conveyed by (Kridalaksana, 2008b) stating that class of words is a word categorization with similar formal characteristics and classification of noun, adjective, and others to create simple
grammatical rules. Formal characteristics of classes of words are distinguished from one language to another. Nevertheless, if observed from semantic perspectives, there is always similarity among them; such as the class of word of noun that usually represents a person or thing.

The experts’ statements about morpheme, loanwords, structure, and semantical meaning are very suitable with the focus of this research. Therefore, the researcher choose this statement as basic and fundamental theories of this research analysis.

Loanwords possess a basic or distinguished meaning they derive from their origins. However, after being loaned, the meaning usually shifts due to meaning expansion from the basic one or positional changes in the words’ lexical element orders. In this research, the researcher hired theories of both grammatical and lexical meanings as a ‘scalpel’ to analyze Japanese loanwords.

Lexical word meaning is a meaning of linguistic elements as a symbol of particular thing, event, and so on. Linguistic elements has the lexical meaning separately by not regarding its context (Djajasudarma, 2013:16). Therefore, lexical meaning is a meaning existing in the dictionary. In line with it, Chaer (2013:60) believes that lexical meaning is meaning whose characteristics are lexicon, lexeme, or word.

Furthermore, grammatical meaning is a meaning existing as a consequence of affixation, reduplication, and composition processes (Chaer, 2013). Grammatical meaning is a meaning involving an inter-language or meaning relationship that appears as a consequence of word function in a sentence (Djajasudarma, 2013). For example, the based word *sumo* is affixed with the prefix *pe-* . The affixation generates a new grammatical meaning that is *pesumo*, a *sumo* athlete. The example of its use in a sentence is ‘*Pesumo Indonesia itu berhasil menjatuhkan lawannya*’.

**RESEARCH METHOD**

The researcher used written data in forms of Japanese loanwords, taken from offline, online, and printed KBBI 5th edition, (Bahasa, 2016). Besides, the researcher also took the data from popular writings and both unpublished and published results of linguistic research. Oral data were data collected from informants with knowledge and understanding of necessary data (interview with Yamaguchi, 2018).
This research utilized a descriptive analysis method aiming to empirically describe and truly expose the subject, based on existing situation or facts. Then, the researcher gathered the data by applying the observation method ((Sudaryanto, 1993), investigating Japanese loanwords in KBBI, 5th edition, also from Indonesian Wikipedia as complements. The researcher wrote them down altogether. Data selection process was applied by choosing 1) data which are tightly bounded with Indonesian language, such as karate, yoga, judo, karoke, bonsai, etc. 2) data which are not really well known generally but written officially in KBBI, such as panko, nori, hentai, kabuki, etc.

Meanwhile, the researcher completed the analysis by employing the structural morphological theory, observing both basic and derivative structures of Japanese loanwords contained by KBBI and classifying classes of words by analyzing meanings of words based on their grammatical and lexical meaning. It aimed to figure out an optimal investigation realization.

**DISCUSSION**

**Japanese Loanword Meanings and Structures**

In KBBI, Japanese loanword structures are categorized into two: the basic and derivative structure. The basic structure is originated from Japanese basic words or morphemes thoroughly loaned to be Indonesian roots. This basic structure commonly contains of lexical meaning or dictionary meaning. Meanwhile, derivative structures are originated from its roots derived by several methods: 1) affixation by adding Indonesian affixes that are prefix, infix, suffix, and confix; 2) compounding, 3) reduplication, and 4) acronym. Vocabularies having a derivative structure or expansion from one of those four methods commonly have grammatical meanings.

These are Japanese loanwords that are Indonesian basic forms with lexical meanings:

**Roots**

<table>
<thead>
<tr>
<th>Japanese</th>
<th>Indonesian</th>
</tr>
</thead>
<tbody>
<tr>
<td>anime (アニメ)</td>
<td>anime [anime] ‘the Japanese animation’</td>
</tr>
<tr>
<td>bonsai (盆栽)</td>
<td>bonsai [bonsai] ‘a mini tree planted in a mini pot’</td>
</tr>
<tr>
<td>dan (段)</td>
<td>dan [dan] ‘a level in Japanese sports (karate, judo, etc.)’</td>
</tr>
<tr>
<td>origami (折紙)</td>
<td>origami [origami] ‘the art of paper folding’</td>
</tr>
</tbody>
</table>
ikebana (生花) \(\rightarrow\) ikebana \([\text{i}ke\text{b}a\text{n}a]\) ‘the art of flower arrangement’

(Bahasa, 2016)

Vocabularies shown in example 1 were completely loaned from the original language. They were loaned without any customization of pronunciation and spelling. In this case, the Japanese spelling employed was the roman one, not the kanji one. Those five loanwords contain lexical meanings, the same meaning contained by dictionaries.

Affixed words are also loaned in addition to loan the roots, as shown below:

Example 2

\textit{aikido} (合気道) \(\rightarrow\) \textit{aikido} \([\text{ai}\text{k}i\text{d}o]\) ‘a Japanese martial art similar to \textit{judo}’

\textit{aikidoka} (合気道家) \(\rightarrow\) \textit{aikidoka} \([\text{ai}\text{k}i\text{d}o\text{k}a]\) ‘an aikido athlete’

\textit{iaido} (居合道) \(\rightarrow\) \textit{iaido} \([\text{i}\text{a}\text{i}\text{d}o]\) ‘a Japanese martial art by using a samurai’

\textit{iaidoka} (居合道家) \(\rightarrow\) \textit{iaidoka} \([\text{i}\text{a}\text{i}\text{d}o\text{k}a]\) ‘an iaido athlete’

\textit{judo} (柔道) \(\rightarrow\) \textit{judo} \([\text{j}\text{u}\text{d}o]\) ‘a Japanese martial sport’

\textit{judogi} (柔道着) \(\rightarrow\) \textit{judogi} \([\text{j}\text{u}\text{d}o\text{g}i]\) ‘a special garment for judo’

\textit{judoka} (柔道家) \(\rightarrow\) \textit{judoka} \([\text{j}\text{u}\text{d}o\text{k}a]\) ‘a judo athlete’

\textit{karate} (空手) \(\rightarrow\) \textit{karate} \([\text{k}\text{a}\text{r}\text{a}\text{t}e]\) ‘a Japanese martial sport (with empty hands/without weapons)’

\textit{karategi} (空手着) \(\rightarrow\) \textit{karategi} \([\text{k}\text{a}\text{r}\text{a}\text{t}e\text{g}i]\) ‘a special garment for karate’

\textit{karateka} (空手家) \(\rightarrow\) \textit{karateka} \([\text{k}\text{a}\text{r}\text{a}\text{t}e\text{k}a]\) ‘a karate athlete’

\textit{manga} (漫画) \(\rightarrow\) \textit{manga} \([\text{m}\text{a}\text{n}a]\) ‘the Japanese comics’

\textit{mangaka} (漫画家) \(\rightarrow\) \textit{mangaka} \([\text{m}\text{a}\text{n}a\text{k}a]\) ‘a manga maker’

(Bahasa, 2016)

Vocabularies shown in example 2 was wholly loaned without any customization of either spelling or pronunciation. The loanwords became Indonesian roots with the same lexical meaning as in dictionaries although in the Japanese language, they are all derivatives.

In their origins, the pairs \textit{aikido} and \textit{aikidoka}, \textit{judo} and \textit{judoka}, and \textit{karate} and \textit{karateka} consist of two different forms of words. The first form is the root with a lexical meaning; while the second form is the derivative with a grammatical meaning. The utilization of bound morpheme \textit{–ka} generates a new meaning that is the doer. In brief, it means a practitioner, player, or athlete; such as a judo athlete or an aikido athlete.

Those two forms were loaned by Indonesian language as roots. In the Indonesian language, the word \textit{judo} has a lexical meaning ‘a martial sport’. If affixed by the prefix
pe-, it forms *pejudo* that has a grammatical meaning ‘a judo athlete’. The utilization of the word *pejudo* is more common since despite their same meaning, it is more frequently spoken than *judoka*. However, the affixed--*pe karate* (*pekarate*) is uncommon due to the fact that *karateka* or *pemain karate* is more usual.

Besides the bound morpheme --*ka*, there is also the bound morpheme --*gi* in the words *judogi* that has a grammatical meaning ‘a special garment for judo’ and *karategi* that means ‘a special garment for karate’. The two bound morphemes (--*ka* and --*gi*) were not separately loaned from the roots that are *judo* and *karate*.

Example 3

**Origins**

<table>
<thead>
<tr>
<th>Loanwords</th>
<th>Canoyu (茶の湯) [chanoyu²]</th>
</tr>
</thead>
<tbody>
<tr>
<td>canoyu [canoyu] ‘the Japanese tea ceremony’</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Loanwords</th>
<th>Dakocan (だっこちゃん)</th>
</tr>
</thead>
<tbody>
<tr>
<td>dakocan [dakocan] ‘a black plastic doll’</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>

<th>Iaidoka (居合道家) [iaidōka²]</th>
</tr>
</thead>
<tbody>
<tr>
<td>iai [iaikido] ‘an iaido athlete’</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Loanwords</th>
<th>Wazari (技あり) [waza-ari²]</th>
</tr>
</thead>
<tbody>
<tr>
<td>wazari [wazari] ‘a judo winning’</td>
<td></td>
</tr>
</tbody>
</table>

The loaning process of vocabularies listed in Example 3 was done by customizing their pronunciation and spelling. The spelling is not derived from kanji but Roman ones called *romaji* (ローマ字 Rōmaji²), the Japanese language in Roman alphabets. It is in relation with loanword theory ((Indonesia, 2009)), and it does not apply constructive analysis with other researches.

**Derivatives**

In terms of Japanese loanwords, not all words can be derived by either affixation, compounding, or reduplication. Below are Japanese loanwords derived by affixation and compounding processes.
1) karate (空手?)  
\textit{karate} [karate] ‘a Japanese martial sport (with empty hands/no weapons)  
(Bahasa, 2016)

If affixed by the prefix \textit{ber-}, the word \textit{karate} alters into \textit{berkarate} with a grammatical meaning ‘to perform karate’. If combined with another word, the word \textit{karate} creates a new meaning. For instance, the phrase \textit{pemain karate} means ‘a karate athlete’. Other examples are the phrases \textit{pelatih karate} that means ‘a karate instructor’ and \textit{pakaian karate} that means ‘a special garment worn by karate athletes’. Those new meanings due to affixation or compounding processes are grammatical meanings, the example of that can be observed as follows:

1a. \textit{Olahraga karate ditandingkan dalam Asean Games.}  
‘Karate is included in the ASEAN Games’.
1b. \textit{Pelatih karate itu seorang perempuan.}  
‘The karate instructor is a woman’.

2) jibaku (自爆?) ‘jibaku’ [jibaku] ‘to attack enemies by hitting them with bodies (that have been equipped with bombs or other explosives); reckless, to act as a daredevil’

In the Indonesian language, the word \textit{jibaku} changes to be \textit{berjibaku} with the same meaning as its roots if affixed by the prefix \textit{ber-}. Nevertheless, the Indonesian word \textit{jibaku} is not a root but a derivative word. It means that it contains a grammatical meaning ‘to attack enemies with bravery to die’. The utilization of those two words is as follow:

2a. \textit{Sasuke tewas setelah jibaku} ‘Sasuke died after performing a \textit{jibaku}’.
2b. \textit{Sasuke berjibaku dengan musuh.} ‘Sasuke is performing \textit{jibaku} to Enemies’.

3) judo (柔道?) ‘judo’ [judo] ‘a Japanese martial sport from Jujitsu, emphasizing on quick movements and balance to attack enemies’

If affixed by the prefix \textit{pe-} (an allomorph of the prefix \textit{per-}), the Indonesian word \textit{judo} becomes \textit{pejudo}, a judo athlete (\textit{judoka}) (grammatical meaning). If it is combined with the word \textit{pemain}, \textit{pelatih} or \textit{pakaian}, they form the phrase \textit{pemain judo}, \textit{pelatih judo}, \textit{pakaian judo},
a judo instructor, or *pakaian judo*, a special garment for judo. Meanings due to affixation process and the word composition can be observed in the example below.

3b. *Olahraga judo berasal dari Jepang* ‘Judo originates in Japan’.

4) *kanji* (漢字?) ‘*kanji*’ [kanji] ‘Japanese alphabets’

In *Kamus Besar Bahasa Indonesia*, 5th edition *kanji* is a basic noun consisting of one morpheme and three different meanings. It can only be derived by word combination or compounding. For example, if combined with the word *huruf*, it transforms into the phrase *huruf kanji*, Japanese alphabets started to use in the first century B.C., each alphabet depicts one word or morpheme’. Meanings produced by the compounding process can be investigated from the examples below.

4a. *Dia belajar membaca huruf kanji* ‘He learns to read kanji’.

4b. *Ia membuat kanji* ‘He writes in kanji’.

5) *mochi* (餅?) ‘*moci*’ [moci] ‘the Japanese rice cake’

The Indonesian word *moci* means a rice cake for a New Year celebration, *mochitsuki*. It is a basic noun consisting of one morpheme. It is unusual for it to undergo the affixation process but it is allowed to have combination or compounding processes. For instance, the word *moci* is combined by the word *kue*, creating the phrase *kue moci* that has the same meaning as the Japanese word *mochi*.

5a. *Kue moci terbuat dari beras ketan* ‘*Mochi* is made of rice’.

5b. *Moci adalah kue khas Jepang* ‘*Mochi* is a Japanese special cake’.

6) *sakura* (桜?) ‘*sakura*’ [sakura] ‘cherry blossoms’

The Indonesian word *sakura* means ‘white or pink flowers that blossom during early summer in Japan’. It is a basic noun consisting of one morpheme and only allowed to undergo the compounding process. For example, if combined with the word *bunga*, it alters into the phrase *bunga sakura* that contains the same meaning as the Japanese one.

7) *karaoke* (カラオケ?) ‘*karaoke*’ [karaoke] ‘to sing a song by playing its recorded instrumental’
The Indonesian word *karaoke* means a kind of pleasure by singing popular songs by playing their recorded instrumentals. If affixed by the prefix *ber-*-, it changes into *berkaraoke*, to sing in karaoke. Besides, the word *karaoke* can undergo a compounding process by combining it with the word *rumah, rumah karaoke*, a karaoke place. The examples are below.

**Japanese Classes of Words in Kamus Besar Bahasa Indonesia, 5th edition**

Class of words is defined as a group of words that have similarities in their formal behaviors. The behaviors are diverse among languages. However, if it is semantically observed, there are indeed similar behaviors as nouns that usually represent people or things.

Based on the data, we can conclude that noun is the Japanese word most frequently loaned by the Indonesian language. Below are examples of noun that have been classified based on the categories of things, activities, or meanings contained by one word.

**Noun**

**Nouns Originating in Japanese Culinary**

<table>
<thead>
<tr>
<th>Word</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>ebi (えび?)</td>
<td>dried shrimp</td>
</tr>
<tr>
<td>mochi (もち?)</td>
<td>rice cake</td>
</tr>
<tr>
<td>mirin (みりん?)</td>
<td>yellow, sweet wine to cook</td>
</tr>
<tr>
<td>nori (海苔?)</td>
<td>dried seaweed</td>
</tr>
<tr>
<td>panko (パン粉?)</td>
<td>the Japanese breadcrumbs</td>
</tr>
<tr>
<td>sake (酒?)</td>
<td>rice wine</td>
</tr>
<tr>
<td>sashimi (刺身?)</td>
<td>the Japanese culinary made of very fresh raw meat or fish</td>
</tr>
<tr>
<td>sukiyaki (すき焼き?)</td>
<td>a Japanese culinary</td>
</tr>
<tr>
<td>sushi (すし?)</td>
<td>a Japanese culinary</td>
</tr>
<tr>
<td>takoyaki (たこ焼き?)</td>
<td>a ball-shaped snack, filled with octopus or the kind</td>
</tr>
<tr>
<td>tempura (てんぷら?)</td>
<td>a Japanese culinary made of battered</td>
</tr>
</tbody>
</table>
teriyaki (照り焼き?) [teriyaki]  
seafood

[tofu (豆腐?) [tofu]]  
a Japanese grilled culinary

udon (うどん?) [udon]  
thick wheat noodle

wasabi (わさび?) [wasabi]  
a plant processed to be food seasoning

yakitori (焼き鳥?) [yakitori]  
the Japanese satay

(Bahasa, 2016)

Nouns Originating in Cultures and Arts

haiku (俳句?) [haiku]  
a short poem consisting of three lines with the pattern of 5, 7, 5

hentai (変態?) [hentai]  
a pornographic Japanese pop cultural Product

hiragana (ひらがな?) [hiragana]  
a Japanese writing style, one alphabet for one word

kabuki (歌舞伎?) [kabuki]  
a Japanese traditional theater

kanji (漢字?) [kanji]  
a Japanese alphabets from China

karaoke (カラオケ?) [karaoke]  
to sing a song by playing its recorded instrumental

katakana (カタカナ?) [katakana]  
Japanese alphabets to write loanwords

kimono (着物?) [kimono]  
the Japanese traditional clothes for both men and women

mochitsuki (餅搗き?) [mocitsuki]  
the Japanese new year celebration performed by making mochi together

noh (能nō?) [noh]  
the Japanese musical drama

onagata (女形onnagata?) [onagata]  
a male actor acting as a woman in kabuki

romaji (ローマ字Rōmaji?) [romaji]  
the Romanized Japanese language

suiseki (水石?) [suiseki]  
a naturally shaped rock
tsuru (鶴) [suru] considered as an art
(Bahasa, 2016)
a stork origami

Nouns Originating in Japanese Militaries and Colonization

budanco (武団長 budanchō) [budanco] a group commander
bushido (武士道 bushido) [bushido]
cudanco (中団長 Chūdanchō) [cudanco] a captain (a community commander)

battalion
daidan (大団 dai dan) [daidan]
daidanco (大団長 daidanchō) [daidanco] a battalion commander
gunseikan (軍政官 gunseikan)
the Japanese military government during its colonization in Indonesia

kamikaze (神風 kamikaze) suicide pilots
keibodan (警防団 kaibodan) a Japanese police assistant during its colonization in Indonesia

karakuri (からくり karakuri) a mechanism to move things

kempetai (憲兵隊 kenpeitai) [kompetai] Japanese military police during the World War II in Indonesia

kumicho (組長 kumichō) [kumico] the head of neighborhood during the Japanese colonization in Indonesia

samurai (侍 samurai) Japanese aristocrats from Japanese soldiers

syodanco (小団長 shōdanchō) [syodanco] a lieutenant (platoon commander)
syogun (将軍 shōgun) [syogun] governors ruling Japan during the 12th-19th centuries

romusa (労務者 romusha) [romusa] Indonesian laborers during the Japanese colonization

(Bahasa, 2016)
Nouns Originating in Sports

- **judo** (柔道) [judo] — a martial sport
- **judoka** (柔道家) [judoka] — a judo practitioner/athlete
- **kata** (形) [kata] — movements in karate, judo, aikido, etc.
- **karate** (空手) [karate] — a martial sport (with empty hands/without weapons)
- **ken** (拳) [ken] — fists, steps in martial arts (in judo, kempo, etc.)
- **kempo** (拳法) [kempo] — a martial art
- **kendo** (剣道) [kendo] — fencing by using a bamboo sword
- **sumo** (相撲) [sumo] — the Japanese wrestling sport
- **taiso** (体操) [taiso] — the Japanese morning gymnastics
- **yuyitsu** (柔術) [yuyitsu] — a Japanese martial sport

(Bahasa, 2016)

General Nouns

- **emoji** (絵文字) [emoji] — the Japanese emoticons
- **koi** (鯉) [koi] — decorative fish
- **sakura** (桜) [sakura] — cherry blossoms
- **Shinto** (神道) [sinto] — a religion originating in Japan
- **sensei** (先生) [sensei] — a teacher
- **tsunami** (津波) [sunami] — a tremendous wave (due to a strong earthquake occurring in the bottom of the sea)

(Bahasa, 2016)

Verbs

- **banzai** (万歳) [banzai] — long live!
- **harakiri** (腹切り) [harakiri] — to commit suicide for honor
- **jibaku** (自爆) [jibaku] — to attack enemies by hitting bodies equipped with bombs;

(Bahasa, 2016)
reckless, to act as a daredevil

Adjectives

- **bakero** (バケロ bakayaro³ [bakero])
  - fool, dumb (a Japanese swear word)
- **ipon** (一本³ [ipon])
  - an absolute winning in judo
- **kiai** (気合³ [kiai])
  - a shout before conducting a martial movement
- **umami** (旨味³ [umami])
  - delicious

(Bahasa, 2016)

**CONCLUSION**

According to the previous description, it is concluded that there are two Japanese morphological structures in *Kamus Besar Bahasa Indonesia, 5*th edition, namely root structure and derivative structures. Root structure is a word consisting of one morpheme; while derivative structure is a word undergoing either affixation or compounding process.

The affixation process in Japanese loanwords is the addition of prefix *ber-* or *pe-* in the roots to create a new meaning. Moreover, the compounding process in Japanese loanwords found in *Kamus Besar Bahasa Indonesia, 5*th edition are the combination of the word *pemain* with the word *karate*, the word *pemain* with the word *judo*, the word *pelatih* with the word *karate*, the word *pelatih* with the word *judo*, the word *kanji* with the word *huruf*, the word *moci* with the word *kue*, and the word *bunga* with the word *sakura*. Lexical meaning in Japanese loanwords are found in root structures, while the grammatical meanings are found in derivative structures.

There are three classes of Japanese loanwords found in *Kamus Besar Bahasa Indonesia, 5*th edition that are 1) nouns, 2) verbs, and 3) adjectives. Noun is the most dominant class of word, originating in various names of things from diverse categories as culinary, culture, art, sport, military, and words created during the Japanese colonization in Indonesia.

The Japanese loanwords contained in *Kamus Besar Bahasa Indonesia, 5*th edition have the same structures due to their customization with the Indonesian language. Those
phenomenon happened for the reason that the vocabularies have been merged with Indonesian vocabularies for a long time.
